Aluminum Housed Chassis Mount Resistors – 5, 10, 25, 50 Watt, 1% (Precision Power Wirewound)

HEI's high power aluminum housed resistors use centerless ground ceramic cores for uniform heat distribution. Molded in a special high temperature material and mounted in an extruded aluminum finned housing, these designs provide maximum power dissipation and reliability. They have tinned copperweld leads for solderability and meet or exceed MIL-R-18546, including "N" characteristic, and MIL-R-39009. **Specifications:** • Power Rating: Based on full power operation at 25°C, and maximum hotspot 275°C. • Mounting on proper heat sink as follows: For 5 and 10 Watt – use 4" x 6" x 2" x .040" (101.60 x 152.40 x 50.80 x 1.02mm) aluminum chassis; For 25 and 50 Watt – use 5" x 7" x 2" x .040" (127.00 x 177.80 x 50.80 x 1.02mm) aluminum chassis.

TA Series Power Chip® Resistors - Thick Film on Alumina Substrate

5, 10 and 25 Watt

Ohmite Power Chip Resistors are thick film on alumina oxide substrates with copper plated silver conductors, Ruthenium oxide resistance material, and a glass passivation layer. These resistors offer very low inductance (50nh measured at 1MHz) and outstanding power density (10W/in2). Repetitive transient capability is 5 times rated power as long as one second average dissipation remains equal to or less than the free air rating.

Features: • Wide resistance range • Low inductance • High power density • Easy to install. PC-mountable. **Material:** • Terminals: Solder Plated Phosphor Bronze • Coating: Glass. **Electrical:** • Resistance Tolerance: ±5% • Power Rating: Based on 25°C free air with linear derating to 0 watts at 350°C • Maximum Operating Voltage: 350 VAC, 500 VDC through glass 1000 VAC, 1500 VDC through substrate • Overload: Five times rated power, as long as the one second average dissipation does not exceed the wattage rating • DR: ±2%, 2000 hours • Derating: Linearly from 100% @ +25°C to 0% @ 350°C

89 Type - Aluminum Housed Axial Lead Wirewound Resistors

The 89 Type are high performance axial-lead-type resistors. They are better suited to withstand vibration, shock and harsh environmental conditions than standard axial-lead resistors. The 89 Type are aluminum housed to maintain high stability during operation and to permit secure mounting to chassis surfaces. The housing also provides heat-sinking capabilities. The 89 Type resistors meet or exceed MIL-R-18546 specifications.

CANTHERM

Encapsulated Thermostats

Encapsulated Thermostats are ideal for sensing the temperature of a surface or of stagnant air in an enclosure. Available with PC pins or with flexible wire leads for remote installation. Their high temperature resistance and high dielectric strength make it ideal for protecting heatsink-mounted semiconductors. Other applications would be protecting power supplies, or simply turning on a fan at a desired temperature.

Current Sensitivity: The thermostats are not current sensitive at rated currents. At loads above the rated values, up to maximum loading there is self-heating of the current carrying contacts.

Insulation Resistance: 2500 V @ 25°C, Leads to Earth 1500 V @ 100°C. Across open contacts, dependent on response temperature: 500 V eff. AC.

Marking: Response temperature in clear text (5°C steps). Normally Closed = blue or black (epoxy); Normally Open = red (epoxy)

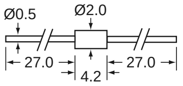
DK Series



The DK range of DO-35 packaged NTC thermistors is designed for temperature measurement and control in applications which demand cost effective reliability. Typical applications include domestic appliances, automotive systems, data processing equipment and heating/ventilating/air conditioning control.

The hermetically-sealed construction combines the advantages of high temperature operation and high reliability of glass bead types with the closer tolerances associated with chip devices. The glass encapsulation offers the additional benefit of high voltage insulation.

Resistor Networks

OVER 1,500 VALUES AVAILABLE

750 SERIES

Single-In-Line

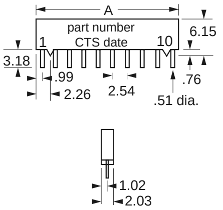
Solid ceramic networks are more efficient because they operate at lower temperatures. This translates into long term reliability in a resistor network.

Specifications:

• **Resistance Values:** 22Ω through 1 MegΩ • **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:

• Low-profile construction • Excellent power dissipation • High reliability • Alumina substrate



770 SERIES

Single-In-Line Conformal

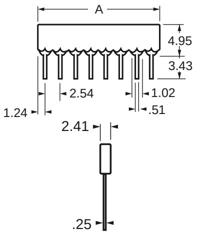
Standard Products 770 series is available in 6, 8, and 10 pin sizes, and in many available resistance values.

Specifications:

• **Resistance Values:** 22Ω through 1 MegΩ • **Resistance Tolerance:** ±2% • **Temperature Coefficient:** ±100PPM/°C typical

Features:

• High reliability resistors • Low-profile construction • .100" lead spacing • High reliability • Alumina substrate



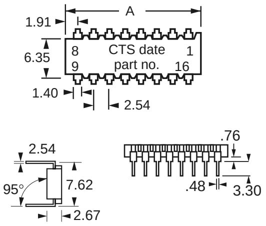
760/761 SERIES

Dual-In-Line

Thin cover coating generates higher power ratings. Thin proprietary cover protection keeps resistors near the surface, allowing the alumina substrate to act as a heat sink. That means higher power ratings than molded networks.

Specifications:

• **Resistance Values:** 22Ω through 1 MegΩ • **Resistance Tolerance:** ±2%. • **Temperature Coefficient:** ±100PPM/°C typical



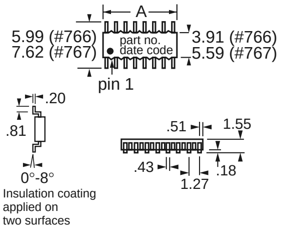
766/767 SERIES

Dual-In-Line Surface Mount

Requires 30% less board space than molded networks of the same power rating.

Specifications:

• **Resistance Range:** 22Ω through 1 MegΩ • **Resistance Tolerance:** Standard: ±2% • **Max. Operating Voltage:** 50V not to exceed rated power • **Temp. Coefficient:** 100Ω through 1 MegΩ ±100PPM/°C typical, Below 100Ω ±200PPM/°C typical • **Operating Temp. Range:** –55°C to 125°C • **Storage Temp. Range:** –55°C to 125°C • **Dielectric Strength**: 100V



NEW! 768 SERIES

Dual-In-Line Surface Mount

Medium body, small outline products. Low profile — board to network clearance of 0.005"/0.010".

Specifications:

• **Resistance Range:** Standard: 10Ω to 1MegΩ • **Resistance Tolerance:** Standard: ±2% or 0.5Ω (whichever is greater) • **Max. Operating Voltage:** 50V not to exceed rated power • **Temp. Coefficient:** Standard: 100Ω to 1 MegΩ ±100PPM/°C typical, 10Ω to 99Ω ±200PPM/°C typical • **Operating Temp. Range:** -55°C to 125°C • **Dielectric Strength:** 100VAC

Panasonic "ZNR" Transient/Surge Absorbers Type D and E

Features: • Excellent clamping voltage characteristic and fast response time (50nsec.) when subjected to impulse surges. Eliminates the discharge lag that is indurative of gap-type arrestors. • Bilateral and symmetrical V-1 characteristic curve. The ZNR can, therefore, be used both in AC and DC circuits, for protection of either positive or negative transients. Panasonic ZNRs are zinc oxide nonlinear resistors whose resistance changes as a function of the applied voltage. The ZNR has a bilateral and symmetrical V-1 characteristic curve and can therefore be used in circuits in place of back-to-back zener diodes. This gives your circuit clamping protection in either direction. The ZNR thus provides a highly reliable and economical way to protect against repeated high voltage transients and surges such as those produced by lightning, switching surges and noise spikes.

Ratings: Varistor Voltage: The voltage between two terminals with the specified measuring current CmA DC applied is called Vc. The measurement shall be made as fast as possible to avoid heat affection.

Maximum Allowable Voltage: The recommended maximum sine wave voltage (rms) or the maximum DC voltage that can be applied continuously.

Withstanding Surge Current: The maximum current within the varistor voltage change of 510% with the standard impulse current (8/20µ sec.) applied one time.

Maximum Clamping Voltage: The maximum voltage between two terminals with the specified standard impulse current (8/20µ sec.) illustrated.

V Series: ZNR Surge Absorbers Type D,Series V, have been put on the market as a result of the development of a new ceramic material composition, higher quality of parts and materials used in the varistor and an improvement of manufacturing process control. They have a smaller size but a larger surge current and energy ratings so that they can be used in smaller equipment and exhibit their excellent surge protection ability in severe conditions. **Features:** • Improved in "Surge Current Handling Capability (@ 8/20 µs, 2 times)" by 1.6 to 3.0 times over the current conventional type. • Very large "Energy Handling Capability" absorbing transient overvoltages in compact sizes • Varistor voltages 250V-1850V are listed under UL1414, UL1449 and CSA 2221 01, varistor voltages 82-150V are UL1449 only • Wide products range for transient/surge protection on AC 100V to AC 480V nominal system with the maximum peak current ratings of 600A to 6500A (@ 8/20 µs, 2 times) • Operating Temperature Range -40°C to 85°C

Panasonic

"ZNR" Chip Type Type CF & SF Surface Mount

Features: • Designed for flow/reflow soldering • Excellent response against high steep surge voltage • Compact package with large withstanding surge capability • Low Clamping Voltage for better surge protection • SF Type has the ability to withstand 2 or 3 times the surge current of the CF Type

Suggestions for Handling: Flow Soldering: Recommended condition: 260°C within 5 seconds. Suggestions: Gas removal is recommended to keep good solderability at high mounting density of components. Reflow Soldering: Recommended condition: 230°C within 10 seconds. Suggestions: If land is too large in comparison with the size of the terminal surface, part may be ill situated at solder melting.

Fig. 4

Features: • Shaft - 1/4" (6.35mm)

400 Series: 1" (25.40mm) Calibrated dials designed for multi-turn potentiometer up to ten turns or other rotary devices. The knob attaches directly to the shaft, and the body of the dial is mounted rigidly to the panel, therefore, accurate readings with a ratio of 1,000 to one for ten turns are provided with zero backlash and reading error.

500 Series: 1" (25.40mm) Single turn calibrated scale dial.

600 Series: 1" (25.40mm) Uncalibrated dial. Mounting Requirements: 1/4" (6.35mm) shaft with 3/8" x 32-NEF-2A Bushing.

3400 Series: Readout and Operation: Unit shall register a total count of 20 turns. The number in the window (0 through 19) indicates completed number of turns of the drive sleeve. Graduated circular dial indicates the percent of a partial turn of the drive sleeve. Transfer point: The number in center of window shall change as graduated dial rotates between 94 and 0. Rotation: Readout shall increase with clockwise and decrease with counterclockwise rotation. Brake Lever Operation: Positive Detent. Accuracy: Backlash shall be zero between graduated dial and drive sleeve. Mounting: Install mounting bracket between panel and panel nut. The dials mount directly to shaft with No. 4-40 spline socket set screw, located adjacent to No. 95 on graduated dial. 7/8" (22.23mm) diameter.

NEW! Model 15 Turns Counting Dial

The left-hand numeral of the Model 15 Multidial indicates the total number of revolutions of the drive sleeve (component shaft) that have been completed. The center numeral and right numeral indicate tenths and hundredth of a revolution, respectively. The graduations between the numerals on the right digit wheel can be read to one five-hundredth of a revolution of the drive sleeve. Example: If the reading in the window displays 652, the reading is 6 turns plus 52% of the seventh turn. Use of the graduations can further subdivide the reading at this setting.

Environmentally Sealed Keypads

700 Series Sealed Keypads

The 700 Series of sealed keypads intended for use individually, or as modular building blocks to create more complex key-panel layouts. Unlike other sealed keypads, the 700 series have excellent tactile characteristics providing fast and reliable data input. When a keytop is depressed a conductive rubber pill makes contact with a gold on nickel plated PCB. These contact materials provide the highest level of protection against corrosive atmospheres and contact oxidization. Each keypad has interchangeable keytop legend tiles. Keypads come in two colors, gray or black, and feature a matrix style output. Instructions and pinouts are included. Compatible with Storm Universal Encoder part no. "MGR1301-ND".

OMRON® Basic Switch

Omron's "Z" Series switches feature 15A contacts which directly switches such loads as motors, halogen lamps and solenoids. Omron's "A" Series has the same body yet switches 20A loads with large inrush currents. All switches feature screw terminal connections and are UL listed CSA certified. Both series are momentary action, SPDT versions.

NEW! **NKK® switches**

Miniature Toggle Switches *(Cont.)*

M2T Series: Interior bushing is sealed with o-ring which surrounds the actuator. Bushing and top of the housing are one molded piece, achieving the exterior seal. Ultransonic welding is used to seal the bushing unit to the base. Terminals are epoxy sealed for safeguarding the switch at the base
Features: Electrical Capacity: Logic Level (code G): 0.4VA maximum @ 28V AC/DC maximum **Dielectric Strength:** 1,000V AC minimum between contacts; 1,500V AC minimum between contacts and case **Mechanical Life:** 100,000 operations minimum **Electrical Life:** 50,000 operations minimum for gold; 25,000 operations minimum for silver **Operating Temp Range:** -30°C through +85°C

B Series: Sealed body construction permits switches to be subjected to time-and money-saving automated soldering techniques. Can be safely cleaned of flux without fear of compromising operating characteristics.
Features: Electrical Capacity: Logic Level: 0.4VA maximum @ 28V AC/DC maximum **Dielectric Strength:** 500V AC minimum **Mechanical Life:** 100,000 operations min. for On-On and On-Off-On **Electrical Life:** 50,000 operations min. **Operating Temp Range:** -30°C through +85°C

Electrical Specifications:

Initial Contact Resistance: 25 milliohms (209, 219 Series); 50 milliohms (193, 194, 204, and 206 Series); 100 milliohms (195, 208, and 218 Series).

Max. Contact Resistance: 100 milliohms after 10,000 cycles switching 50mA @ 24VDC (206 Series); 100 milliohms after 7,000 cycles switching 50mA @ 24VDC (193 and 194 Series); 500 milliohms after 2,000 cycles switching 50mA @ 24VDC (195 Series); 500 milliohms after 2,000 cycles switching 50mA @ 15VDC or 100mΩ after 1,000 cycles switching 25mA @ 24VDC (208 Series); 50 milliohms max. at end of life (209 and 219 Series).

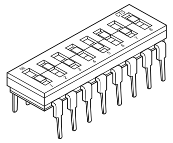
Gold finish refers to internal contact area of the switch, terminals are solder coated.

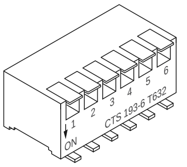
Max. Non-Switching Rating: 100mA or 50VDC.

Insulation Resistance: Across open switch and between adjacent closed switches - 1 x 10^9 ohms (218 Series: 100mΩ min.).

Dielectric Breakdown: 500VDC max. for 1 min. (218 Series – 300VDC max.).

Switch Capacitance: Between adjacent switches max. - 5.0pF (218 Series: 10pF).





Shock: Per MIL-STD-202F, method 213B, condition A with no contact inconsistencies greater than 1µsec (206, 208, 209 and 219 Series); no mechanical damage or changes of switch settings with 25G applied (193, 194, 195, 204 and 218 Series).

Vibration: Per MIL-STD-202F, method 204D, condition B (.06" or 15G's between 10Hz to 2KHz) with no contact inconsistencies greater than 1µsec (204, 206, 208, 209, 218, and 219 Series). No mechanical damage or changes of switch settings during or after testing when tested in three mutually perpendicular planes at 10-50Hz sweep or at 60Hz constant vibration (193, 194 and 195 Series).

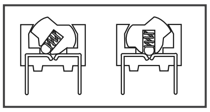
Grayhill DIP Switches



Grayhill's unique spring and ball contact design offers unparalleled reliability compared to conventional wiping contact designs. When actuated the ball rests between two contacts allowing multiple points of contact while the spring compression is at maximum pressure. Temperature, humidity and vibration have minimal affect on this design.

Specifications: • **Mechanical Life per switch position:** 76/78 – 20,000; 90B – 5,000 • **Contact Resistance:** Initially ≤ 30 mΩ • **Insulation Resistance:** 5,000 • **Dielectric Strength:** 750V • **Current Carry:** 3A • **Switch Capacitance:** 2pF • **Operating Temperature:** -40°C to +85°C • **SMT Processing Temperature (90HBW, 90HBJ):** 260°C Max.

HAMLIN Magnetic Reed Switches

The basic reed switch consists of two ferromagnetic reeds, hermetically sealed in a gas filled capsule. When these reeds are introduced to a magnetic field, they assume opposite polarities and attract toward each other closing the contacts. When the magnetic field is reduced beyond the spring force of the reeds the contacts again spring open. Hamlin's reed switches are ideal in auto, marine and moist environment applications and operating environments can be almost anywhere from air, submerged in water or fuels, to dust-laden atmospheres.

HAMLIN Magnets

A permanent magnet is the most common source for operating the magnetic reed switch. The method used to position the magnet depends upon the switching requirement but can be used in one of four basic techniques; perpendicular or parallel motion (up and down, side to side) rotation (revolving magnet or switch), shielding (passing a ferromagnetic material between the switch and magnet) or biasing which is using one magnet of opposite polarity to cancel another magnet's lines of force.

C&K's MPS Series Magnetic Proximity Sensors operate when a magnetic field approaches two magnetic reed blades. The magnetic field overcomes the spring tension of the blades and brings the contacts together. When the magnetic actuator is removed, the reeds separate by their own spring tension. Comes complete with reed switch and matching actuator.

FEATURES: • Long Life Expectancy — 10 million operations • Housing made of rugged impact resistant ABS plastic that meets or exceeds UL requirements for fire retardation • Sealed Contacts allowing the reed to operate in damp and dusty environments • Wide gap performance makes magnet and switch alignment less critical.

SPECIFICATIONS: • **Contact Ratings:** 100 VDC or 100 VAC max. @ 0.3 Amp Max.; 1.0 Amp Max. Carry Current • **Operating Temperature:** -40°C to 100°C • **Mechanical & Electrical Life:** 10 Million Operations

MATERIALS: • **Housing/Spacer/Cover:** ABS Plastic (UL94V-0), white • **Wire Leads:** UL1061, 22 AWG: stranded, made of copper or aluminum; Length: 12" (30.48cm) with ends stripped; Color: white • **Magnets:** Alnico V and Ceramic Ferrite 8 (MPS80WG model only).

NOTE: Wide gap contacts are polarity sensitive. Use alignment dots for proper installation of surface mount contacts.

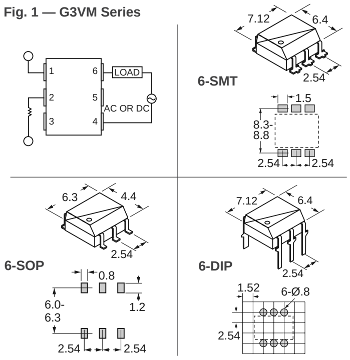
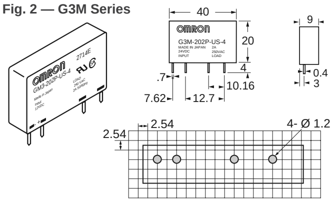
OMRON Solid State Relays

Fig. 1 — G3VM Series



MOS FET relays boast performance with long life, low input drive, and high-speed response to handle minute analog signals with minimum current leakage. The standard G3VM MOS FET relays have dielectric strength of 2,500 VAC between I/O terminals (except SOP relays).

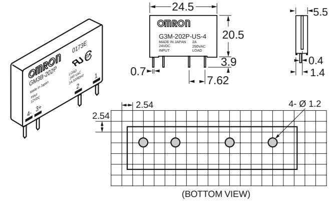
Fig. 2 — G3M Series



Features: • Zero-cross type or random turn-on • Thin design for high-density PCB applications • DC input — AC output for 2 A load • Footprint compatible with industry standard I/O modules • Low cost

Characteristic Data: • Operate time: 1 ms max. • Output ON voltage drop: 1.6 V (RMS) max. • Leakage Current: 2mA max. (at 100 VAC); 5mA max. (at 200 VAC) • Operating Temperature: -30° to 80°C

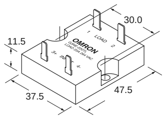
Fig. 3 — G3MB Series



Features: • Low-cost, subminiature, PCB-mounting, solid-state relay switching 2A • DC input: AC output for 2A load at 25°C • Mono-block lead frame facilitates heat dissipation without use of heat sink

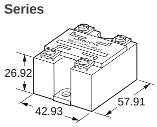
Characteristic Data: • Leakage Current: 1.5mA max. • Operating Temperature: -30° to 80°C

Fig. 4 — G3NE Series



Features: • Ideal for panel mounted applications • Compact aluminum PCB and power elements used • Quick-connect #110 input terminals and #250 output connections

Fig. 5 — G3NA Series

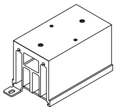


Features: • Built-in varistor effectively absorbs external surges • Protective cover for greater safety is standard • Built-in varistor • Operation indicator (red LED) is standard • Zero-cross or phase control functions

Characteristic Data: • Leakage Current: 5mA max. (at 100 VAC), 10mA max. (at 200 VAC) • Operating Temperature: -30° to 80°C

Fig. 6 — Accessories

Omron heat sinks are designed to dissipate heat buildup during normal operation. Pretapped holes allow exact placement. Heatsink grease or a similar product should be used at the time of placement.



Omron's G3VM series are PCB mounted solid state switches available in a variety of packages and configurations. Extremely low input current and small package make these ideal for microprocessor and logic switching relays. G3M and G3MB relays are larger current relays but offered in a SIP package to reduce board space. Perfect for controlling pumps, alarms, solenoids, etc. G3NE series are larger current relays with QC terminals (.110" QC [2.79] Input, .250" QC [6.35] output) for easy connection. Built in varistor effectively absorbs external surges. G3NA are large power relays with screw terminals and a visible LED (operation indicator). Built-in MOV assembles external surges. Comes with protective cover for safety. Phase controlled outputs are ideal for use in light dimming, motor-speed control, and other power control applications. Approved by UL and CSA

PhotoMos Relays and SSRs

PhotoMos relays combine the advantages of standard electromechanical relays with that of solid state products. This combination allows very fast response times with very low leakage and exceedingly long lifetimes. Reliability and lower input currents are also improved over conventional relays. Aromat's AQV210, 212 and 214 series are SPST solid state switches for applications such as high speed inspection machines, telecom and data communication equipment, instrumentation and security. Capable of switching both AC and DC voltages.

AQW214 and 414 series are independently triggered dual switches available in either dip, smt or sop pkg. AQV221 series are solid state switches designed for switching high frequencies (RF) such as audio/visual signals as well as CD, VCR, and scanners, etc. Aromat's AQ2 sip SSRs are designed as suitable drivers for AC motors, solenoids, valves, etc. These offer excellent noise resistance with an integrated snubber circuit and ultra thin body (only 9mm) for maintenance-free, long life switching. Zero-Cross is a low noise switching output whereas Phase Controlled are ideal for phase controlled applications such as motor speed control and light dimming.

CLARE

OptoMOS Solid State Switches

Figure 1 through 4:

Single and dual output solid state switches housed in a 6 or 8 pin dip package. Highly reliable bounce-free, arc-free switching with over 15 billion operations possible. UL, CSA approved and FCC compatible.

"TS" Series Telecom Switches (Fig. 5):

Incorporates an isolated solid state relay for hookswitch and dial pulse or loop start switching with a bi-directional Opto-coupler for ring detection and on-hook/off-hook detection. Eliminates up to eight discrete components.

CP Clare's "LDA" Series Current Sensors (Fig. 6, 7):

Provides optical isolation between control and switching circuits. Available in a single transistor output (33hfe min) or darlington output (300 hfe min.). Applications include Telecom, Industrial Control and Instrumentation.

Industrial Control and Instrumentation:

Figure 8: Dual linear optocouplers with a wide bandwidth and high gain (55 - 142%), available in either Dip, SMT, OR Flat package.

CP Clare's PLCA110 (Figure 9):

Features a 1-Form-A Solid State Relay integrated with a Solid State Surge Arrester. The Solid State Surge Arrester is designed for secondary telecom line protection, meets FCC Part 68 and provides breakover voltage and repetitive surges with no degradation. The relay portion offers reliable bounce free switching. Ideal for handling hook switch/dial pulse functions.

Specifications:

Operating temperature: -40 to 85° C. Isolation voltage input to output; 2500 vrms. Input power dissipation at 25°C; 150mW. Reverse voltage; 5V max.

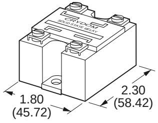
Solid State Relays

9213B-ND Solid State Relay Design Guide **$19.95**

Fig. 1



Series 1, HD, HA: • These SPST-NO relays deliver proven reliability in the most demanding applications. Output consists of an SCR AC switch, available in either zero voltage turn-on or random turn-on, phase controlled models. (-10 versions are phase controlled. Crydom part numbers ending in "B" are normally closed versions.)

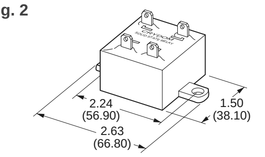
Series T: • Industry Standard Package • Snubbers are included for high DV/DT applications and inductive loads, together with zero-voltage switching to reduce inrush currents and electrical noise.

Series H12: • High voltage relays use IC driven circuits for switching loads up to 660 VAC with 1200 Volts blocking standard.

Series 1-DC: • Low On-State Resistance • Paralleling Capability for Higher Currents • DC output relays feature MOSFET technology for low on-state resistance, assuring easy paralleling and switching capabilities to 40 amps at 100 VDC.

Series CS: • Low Leakage • SCR AC switch output models feature low off-state leakage (snubberless), zero-voltage switching and have a broadened operating range at both 120V/240VAC line voltages.

Fig. 2



Series EZ: • Low Leakage • Quick Connect Terminals • Offers a low profile package with the convenience of quick connect terminals • 4000 Vrms opto-isolation and low off-state leakage are standard.

Two (Dual) or four (Quad) totally independent AC output relays come in a single standard panel-mount package. Utilizing an AC switch output with internal snubber, relays provide greater protection against false triggering.

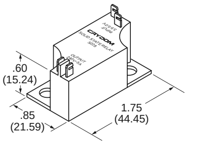
Solid State Relays, *(Cont.)*

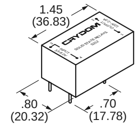
9213B-ND Solid State Relay Design Guide **$19.95**

Fig. 5



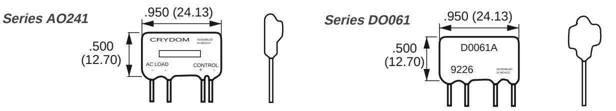
Relays combine small size and high ratings in a package designed for easy heat sink or panel mounting. Standard .187 push-on terminals assure quick connection and are arranged to provide maximum isolation between signal and power circuits. Model S228C is a snubberless design for applications that require low off-state leakage.

Fig. 6



These solid state relays combine small size and high ratings in a PC-board-mounted SPST-NO design. Available with (S30 types) or without snubber network (S3 types), Series 3 is an ideal replacement for power reed relays in microprocessor or computer-based logic level systems. Designed for long, reliable service in demanding industrial environments.

Fig. 7



Series AO241

• SPST-NO miniature SIP solid state relays • Designed for switching highly inductive, low current loads such as solenoids. Also suitable for all loads up to 1.5A. R suffix are random turn-on versions.

Series DO061

• SPST-NO DC bipolar transistor output relays in epoxy-coated packages utilize the popular .10" grid lead spacing. DMO063 is mosfet output rated at 3A/60VDC.

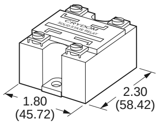
Form C SPDT True Break Before Make (BBM) - SCR Type

The Form C Solid State Relays combine a precision timing control system and two solid state relays in one package. Internal logic, switches off one load before switching on the other load. Available in either AC output or DC output up to 40 amps. Dry closure inputs require a switch or electromechanical relay contact to trigger inputs.

Fig. 12



Series PCV Analog Power Controller

The Series PCV Analog Input Power Controllers are 0-100% variable power controllers for 120 or 240 VAC loads which vary with an analog input of 2 to 10 Volts DC. The input and output are proportional by integrating a complete phase fired logic system and a solid state relay in the same package. Applications include heaters and lighting, motors and feeders, etc.

Typical Turn-On Delay For Various Timing Resistances

Resistor	Time (DSD)	Time (DLD)
0 (Short)	0.10 sec.	1.6 sec.
10KΩ	0.19 sec.	3.1 sec.
100KΩ	0.94 sec.	15 sec.
470KΩ	4.0 sec.	64 sec.
1.0MΩ	8.3 sec.	133 sec.

Series DSD, DLD Time Delay Relay

These Delay-On time delay relays offer customers to externally adjust their delay time by selecting the value of the external customer supplied resistor. DSD are short time delays and DLD are longer time delay durations. Timing resistors should be 1/4 watt or higher.

Crydoms G2 series of SSR's feature extremely low RDSon, low leakage and long lifetimes. Crydoms SSR's typically comprise an optical coupler, the output of which either drives the line directly or is used to switch a high-power device, such as a silicon-controlled rectifier (SCR) or thyristor. Whatever the drive component, it's the optical-isolation and no-moving-part aspects of the device that grant its many performance features. These features include high I/O isolation (though leakage current is a problem), long life (measured in millions of cycles), low acoustic noise, no contact bounce/arcing, mechanical ruggedness, and low drive-current requirements. They are available in tube packaging for small quantities and prototype work. Tape and reel packaging for automated insertion equipment.

- Opto-Isolated • Solid state I/O switching modules deliver an electrically clean, photo-isolated, noise free "output" interface from logic level control systems to external loads such as motors, valves, solenoids, etc. DMP versions are epoxy conformal coated for fast heat transfer.

Series 6

Series 6 buffered output modules contain additional internal amplification to reduce drive requirements to a level suitable for the Mos devices used in many microprocessor systems. Models are available with either inverting or no-inverting inputs, for 5 and 15 volt logic.

NEW! Tight Seal IP68 Nylon Cable Grips (Glands) with Lock Nuts

Application: The use of synthetic cable grips is almost unlimited within the electrical and electronics industry. Installations where cables must be led safely through a wall of an enclosure will be specified with cable grips. Synthetic cable grips are specified to: • Secure the cable to the enclosure's wall to provide excellent pull-out resistance. • Seal and protect the inside of the enclosure from the unwanted affects of the environment. These contaminants may be water, gas, chemical vapors, or fumes. • Reduce material cost due to use of lighter, less expensive materials, as well as, eliminating the need for running conduit.

Technical Data:
- **Material:** Polyamide PA 6, Self-Extinguishing, Halogen-free
- **Seal:** Neoprene, Oil, and Petroleum Resistant
- **Operating Temperature:** Static (-40°C to 100°C), Dynamic (-30°C to 80°C)
- **Safety Class:** IP68, Waterproof (5 Bar)
- **VDE Test Report:** 12 796-9000-4001/A 2 J

3M Heat Shrinkable Tubing

KYNAR®, EPS-300, SFTW202 GYS, SFTW203, 8420, 8440, & SSC-100x Series

KYNAR® Series-Modified Polyvinylidene Fluoride: Shrink Temperature: 175°C (347°F). **Color:** Clear. **Shrink Ratio:** 2:1. Cross-linked, thin-walled tubing offers a high degree of mechanical strength and high temperature resistance. This has outstanding abrasion resistance and cut-through properties in combination with high dielectric strength. It is inherently flame retardant, semi-rigid and highly resistant to most industrial fuels, chemicals and solvents. Kynar® is a registered trademark of Elf Atochem North America, Inc.

EPS-300 Series-Adhesive-Lined Flexible Polyolefin: Shrink Temperature: 121°C (250°F). **Color:** Black. **Shrink Ratio:** 3:1. Rapidly shrinks to a skintight fit, forcing the melted adhesive to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and waterproof barrier.

SFTW202 GYS Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Green and yellow striped. **Shrink Ratio:** 2:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.

SFTW203 Series-Very Flexible Polyolefin: Shrink Temperature: 100°C (212°F). **Color:** Black. **Shrink Ratio:** 3:1. Meets performance requirements of MIL-I-23053/5 Class 1, and is UL Recognized (File No. E48398) for flame retardance. Can be easily surface painted.

8420 Series-EPDM and 8440 Series-Silicone Rubber Tubes: Color: Black (8420 Series) and Gray (8440 Series). **Cold Shrink™ Insulators-**Open-ended, tubular rubber sleeves that are factory expanded and assembled onto a removable plastic core. Provides a reliable seal without the use of heat, a torch or adhesive - simply position and unwind the core allowing the tube to shrink and form a water-resistant seal.

SSC-100x Series-Solder Splice Connector: Shrink Temperature: 175°C (347°F). **Color:** Identified by tint color of tubing. **Shrink Ratio:** 2:1. Simple, one-piece design. The outer layer is a tube of tinted, translucent, polyolefin heat-shrinkable tubing lined with hot melt sealant, which provides both insulation and a moisture seal, and allows easy inspection of the solder connection. Inside the tubing is a wire locking metal (tin-plated cartridge brass) barrel that holds a fluxed solder disk.

SR-350 EPS-200, CP-221,& VFP-876, Series

SR-350 Series-Semi-Rigid Polyolefin: Shrink Temperature: 135°C, **Color:** Black, **Shrink Ratio:** 2:1. Ideally suited for strain-relief applications, wire marking, protective covering and packaging of delicate components.

EPS-200 Series: Shrink Temperature: 121°C, **Color:** Black, **Shrink Ratio:** 2:1 Rapidly shrinks to a skintight fit, forcing the melted adhesive lining to flow and cover the substrate. The adhesive forms a flexible bond with a wide variety of rubbers, plastics and metals. Upon cooling, the adhesive solidifies forming a permanent, non-drying, flexible and waterproof barrier. Rated for operation at -55°C (-67°F) to 110°C (230°F).

CP-221 Series-Commercial Grade Polyolefin: Shrink Temperature: 121°C, **Color:** Black, **Shrink Ratio:** 2:1. Recommended as a general purpose heat shrinkable tubing for new commercial applications where other types of tubing are now used.

VFP-876 Series-Very Flexible Polyolefin: Shrink Temperature: 100°C, **Color:** Black, **Shrink Ratio:** 2:1. Most flexible of the heat shrinkable, polyolefin tubings. Ideal for jacketing and insulation of flexible wire bundles and sensitive components.

DABURN Butyl Rubber Shrink Tape

DAFLEX ST250 cold shrinking Stretch-N-Seal tape requires no heat to provide a secure covering where the size and/or shape of an object does not permit the use of shrinkable tubing. Simply remove 2" to 3" of tape from the roll, remove the liner, stretch tape to 50% of the supplied width and wrap it spirally around the object, with 50% overlap. In minutes the tape will react with itself to form a mass which will provide protection from moisture, most chemicals, over 1KV per mil. **DAFLEX ST250** can be removed easily without leaving any residue since the tape does not use a mastic or adhesive liner. Shelf life is over 5 years. It is helpful for covering, sealing, splicing, holding bundles, joining and repair applications.

Specifications: • **Operating Temperature:** -40°C to +130°C • UL Approved for 80°C

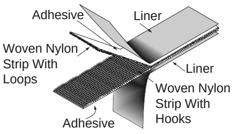
3M Fastening Systems

Scotchmate™ Hook and Loop Fastening Systems



When the two sides of a Scotch-mate Hook and Loop Fastener are pressed together, hundreds of tiny, stiff hooks mesh with a surface of pliable loops. Simply press together to fasten and pull apart to open. And do it thousands of times during the life of your product. Depending on the application, select either plain-backed or adhesive-backed versions. Plain-backed versions are easily sewn or stapled in place. Adhesive-backed fasteners are available for bonding to bare or painted metal, many plastics including plasticized vinyl, plus wood, glass and more.

Plain, standard sew on: Wash or dry clean • Operating Temperature: Up to 250°F (121°C) continuous • Features: Tailored appearance for garments

Pressure sensitive rubber adhesive: • **Features:** General purpose adhesion to most smooth surfaces • **Operating Temp.:** -20°F to 120°F (-29°C to 49°C)

Note: Roll length is 50 yards (45.72 meters)

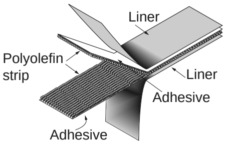
Dual Lock™ Reclosable Fastening Systems



When Dual Lock brand Reclosable Fasteners are pressed together, hundreds of mushroom-shaped stems interlock with one another. An audible snap announces that the fastener is locked. Compared to hook and loop fasteners, you get improved tensile strength with five times more holding power. Open and close hundreds of times during the life of your product. Depending on the applications, you can select either plain-backed or adhesive-backed versions. Plain-backed versions can be easily sewn, stapled or ultrasonically bonded in place. Adhesive-backed versions are available for bonding to bare or painted metal, many plastics including plasticized vinyl, plus wood, glass and more. Mating Type 400 and Type 170 stems provides the most universal Dual Lock fastener combination. As an alternative when the closure involves two flexible surfaces, Type 400 can be mated with itself. For even greater strength closures with limited openings and closing, Type 170 can be mated with Scotchmate Loop Products. **Plain-backed:** Sew on or staple. Wash or dry clean. • Operating Temperature: -20°F - 200°F (-29°C - 93°C) **Pressure sensitive rubber adhesive:** General purpose. Bonds to most surfaces. • Operating Temperature: -20°F - 120°F (-29°C - 49°C) continuous. **Pressure sensitive very high bond Scotch™ VHB™ acrylic adhesive:** High performance for aircraft, automotive, business equipment, electronics. Resists harsh wet/dry, hot/cold cycles. • Operating Temperature: -20°F -158°F (-29°C - 70°C) continuous

Note: Roll length is 50 yards (45.72 meters)

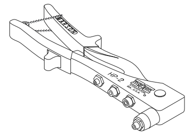
Hand Rivet Tools

HP-2®/39000



The HP-2 is the largest selling hand rivet tool in the industry. Its square shoulder fulcrum pin of cold-formed heat-treated steel prevents pin rotation that can elongate the engaging holes and cause premature tool failure in imitation tools. The HP-2 hand rivet tool sets up to 3/16" steel rivets and comes with four mounted nosepieces (3/32". 1/8". 5/32" and 3/16") and a service wrench.

NEW! Superfuser

Transferring the Image to the PCB Board

Transfers an image via an iron, (e.g. too much pressure, not enough pressure ect). The three elements, Time, Pressure and Temperature are paramount to attaining a perfect transfer.
Because you can use any type of toner in printing the image to the TTS paper, there is one adjustment that controls the high-end temperature setting, making it universally usable for a wide range of different toners.
Includes a 5-sheet pack of TTS paper, a sheet of prepared "sample" test images, and a sample of our 1/4oz blank circuit board.

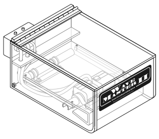
NEW! Wavemaster



A revolutionary new etching tank design! Boards to be etched are placed horizontally into the tank. This allows you to watch the board being etched. A continuous flow of etchant bathes the board in a circular replenishment fashion providing a very clean etch pattern. New see through tank design allows for complete viewing during the etching process. Use only sodium persulfate etchant.

182-1005-ND **$303.00**

NEW! Plated Thru-Hole Kit

Registers double-sided artwork and for making plated thru-holes. Once the two images are attached to the board, it is run through the SuperFuser. Also it can be used for installing the eyelets after the PCB. The eyelets are so small they have to be inserted via a pin! Kit comes complete with bag of 250 eyelets, special forming tool, 10 carbide drill bits, mounting pins, scrubbing pad with full instructions.

SURFBOARDS® by CAPITAL ADVANCED TECHNOLOGIES INC.™ The Breadboarding Medium for Surface Mount

The Surfboard Concept: The concept behind SURFBOARDS is elegantly simple. Many models incorporate foil patterns that are designed to accommodate a wide variety of component mounting footprints. SURFBOARD® models for SOICs and PLCCs provide standard mounting footprints for the IC and depending on the model chosen, will include a prototyping area for additional components or provide a direct pin-out. Most SURFBOARD® models feature SIP (single in line) pins that make prototyping and interfacing with other circuits easy.

Specifications: • Material: G-10 FR-4 Fiberglass laminate, 1oz. Cu. .032" (.81mm). Thickness ±.005" (±.13mm) • Finish: Level 60/40 Solder alloy • S.I.P. Pins: On applicable models. Soldered on .100" (2.54mm) centers. SURFBOARDS® can be hand soldered and are compatible with most industrial soldering processes. (Suggested soldering and assembly guidelines included).

The universal circuit patterns allow for the mounting of 0603, 0805, 1206 and mini-melf packages as well as a wide variety of 3 terminal devices.

Application-Specific Adapters

- **Accept Wide Range of Surface Mount Discrete Semiconductors and ICs**
- **Provide Convenient Medium for Prototyping, Test, and Development**

The 33000 Series of Surfboards® are application-specific adapters that convert surface mount component footprints to Single-In-Line (SIP) format. The boards feature pre-installed pins on .100" (2.54mm) centers making them compatible with conventional breadboards, solderless breadboards, and sockets. The SIP format provides ease of signal probing as well as higher densities when prototyping. Models are available to accept a wide range of surface mount semiconductors and integrated circuits.

Models 33113 and 33623 feature two SIP pins for each pad for higher current applications. Model 33213 features large soldering pads as connection points and SIP pins for measuring purposes. Boards are .031" ± .005" (.79mm ±.13mm) thick FR-4 and feature solder-coated 1-oz. Circuit Foils that can be hand-soldered or soldered by most conventional processes.

SIP pins are soldered in place on .100" (2.54mm) centers. All boards feature solder mask to limit flow of solder to pad area and aid assembly. Just add parts and plug in.

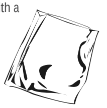
3M Static Control Products

Reusable Transparent Static-Shielding Bags



(2100 Series Metal-Out): 3M 2100R bags are produced with a proprietary "metal-out" construction in which the shielding layer is very near the exterior surface. A thin abrasion-resistant coating protects this metal surface from scratches, but still permits measurement of electrical continuity with common volt-ohmmeters for easy verification of shielding performance prior to reuse.

Economy Static-Shielding Bags

(1900 Series Metal-In): Use these more economical Static Shielding Bags for less demanding applications where reuse and high durability are not a prime consideration. The metal-in aluminum vapor coating is on a thinner 0.48 mil polyester as opposed to the 0.92 mil polyester in the 2100 series.

Economy ZipBag Static-Shielding Bags

(1910 Series Metal-In): The 1910 features a dual track closure for easy opening and closing.

Wrist Strap Workstation Monitor

The 3M 724 Wrist Strap Workstation Monitor continuously verifies the resistance of the operator and work surface ground connections. The monitor uses a reliable resistance method that actually includes the operator's skin resistance to determine if the system is operating properly. If the operator's resistance exceeds 10 megohms or 35 megohms, or the wiring connections exceed 3.7 megohms, audible and visible alarms are triggered. The unit will also warn of potentially dangerous low-resistance situations.

The monitor uses the light and compact dual conductor wrist strap. Dual conductors provide the resistance circuit that is monitored as well as provide grounding redundancy. If one conductor fails, the other will still function to prevent sensitive components from being exposed to static.

Comes complete with a quick connect/disconnect 732 Remote Jack and mounting hardware. 6.5 in. x 3.25 in. x 1.5 in. (162mm x 82mm x 38mm)

Dissipative Mats

8200 Series vinyl mats are soft table and floor mats with a unique three-layer construction. The top layer is durable static dissipative vinyl, which has sufficiently low resistance to discharge static-laden conductors, yet will prevent the shorting of pins on the backs of printed circuit boards laid on the mat.

8200 Series Floor Mats include one 15 ft (4.6m) 3040 Ground Cord and two 3050 Snap Fasteners (installed).

8210 Series Table Mats include two 3M 3050 Snap Fasteners (installed) and one 3M 3048 Wrist Strap Grounding System. Wrist Straps must be ordered separately.

8800 Series rubber mats consist of a top layer of static dissipative rubber laminated to a bottom layer of conductive rubber. Both layers are made from vulcanized synthetic rubber, which offers excellent resistance to oil, grease and most common solvents. They offer superior resistance to heat and hot solder as compared to vinyl or olefinic materials.

8810 Series Table Mats includes two 3034 Snap Fasteners (installed) and one 3048 Wrist Strap Grounding System.

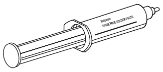
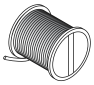
5-Core Solders





Multicore’s flux cored solder contains 5 separate cores of flux inside of the solder wire. This design helps assure even wetting action and prevents “cold” or “dry” solder joints due to a void in the flux. RA solder is a highly active solder that will clean with fast wetting action, used for hard to solder joints. No-Clean solder reduces or eliminates the need for cleaning after the soldering process, leaving very little residue. Crystal is a heat stable flux giving crystal clear residues with minimal fumes. Low Residue is a non-corrosive, halide free flux that leaves minimal residue. Water soluble solder is an active solder that is soluble when exposed to water, eliminating the need for solvent washes. Savbit is a copper containing alloy for reduced erosion of fine copper wires and copper based soldering tips. Used for copper based soldering and extending soldering tip life. Lead-Free Solder has similar soldering characteristics to standard lead based solders but without the health hazard associated with lead.

Dross-X is a solder bath dross reducer for solder baths and wave solder systems to reduce waste during the soldering process. Solder paste is a solder/flux cream intended for soldering surface mounted components. Available in RMA, No-Clean and Water Soluble flux formulations in both 25gm syringes for automatic or manual dispensing and 250gm jars for manual and automated stenciling.

Pastes should be kept refrigerated until 8 hours before use. The 250gm jars should be stirred slightly before use. Pastes must be shipped overnight or 2nd-day-air only, to ensure product integrity.

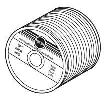
"331" Organic Water Soluble Flux



Kester "331" Organic Flux is a water soluble formula for use in flux-cored solder wire. Kester "331" flux is more effective than rosin fluxes in soldering difficult metals and allows a simple water wash for flux cleanup. The flux is more heat stable than most organic fluxes, resulting in minimal smoke and odor. The residue can be completely removed with a simple water rinse. Kester "331" is classified as type ORH1 per IPC ANSI/J-STD-004. Red Label.

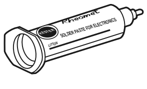
Solder Paste



Kester solder paste was developed for applications of surface mount PCB's and components. All pastes are SN63/PB37 with a mesh size of -325 to +500 (25 to 40 microns) and come in 35gm syringes for hand dispensing, 100gm syringe for hand or automated dispensing, 500gm jars for screen and stencil printing or 600gm cartridge that is Panasonic Panasert compatible. R276 No-Clean formulation provides optimal performance in all types of dispensing applications. Designed for reflow practices that don't require cleaning of the PCB. EP256 (Easy Profile) is an enhanced No-Clean solder paste designed for maximum robustness in reflow profiling and printing. It contains the widest possible reflow-processing window. R500 Water Soluble solder paste is aggressive enough to remove tenacious oxide layers and offers excellent wetting characteristics. R560 series Water Soluble solder is designed to reduce voiding in BGA solder connections and has an extremely stable stencil and tack life. **Pastes should be refrigerated to preserve their usable life.**

Note: To ensure customer satisfaction and product integrity, pastes must be shipped overnight or 2nd Day Air only.

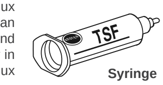
Paste Flux and Liquid Flux Pens

Flux - Pen

Rosin Paste



Syringe

Kester flux pens use a spring-loaded tip to dispense just the right amount of flux while preventing the flux inside from drying out. Tacky Solder Flux is a No-Clean paste flux that maintains its characteristics for up to 8 hours after dispensing and can be used in a wide range of temperature and humidity conditions. Can reflow in both air and nitrogen environments. SP244 is a mildly activated rosin paste flux designed to be used as a No-Clean formula for rework applications.

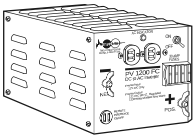
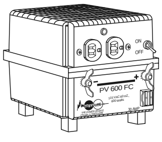
DC to AC Power Inverters





Solid-state electronic power inverters change ordinary 12VDC to 115VAC. Simply plug in your computer, stereo, or household appliances for convenient portable AC power. Use on boats, campers, cars and anywhere 12VDC is available.

Automotive Inverters are housed in a sturdy portable metal case with 12V cigarette lighter plug built-in. Ideal for laptops, test equipment and TV-VCR units.

General Purpose Inverters are low cost power inverters for equipment that doesn't require frequency controlled outputs or high inrush-startup currents. Ideal for most electronic test equipment.

Peak Power models are able to handle up to twice their normal wattage for short periods of time delivering high start-up current, frequency controlled AC, making them ideal for motors, refrigerators, power tools and microwaves.

APS Inverters feature modified sine wave, frequency controlled, fully regulated output. These units automatically sense and switch AC between line power and battery power. A built-in recharge circuit will recharge the battery when line voltage becomes available. Perfect for sump pumps, emergency lighting, and more.

Panasonic Sealed Lead-Acid Batteries

GENERAL FEATURES: *"DO NOT LEAK!!"*

- **High Quality & High Reliability:** The LCR battery has stable and reliable capacity. 100% tested on line for voltage, capacity, and seals. And all vents are 100% visually inspected during the final assembly process.
- **High Power Density:** These batteries save installation space, while providing full and reliable power for the equipment, and many have been designed for rapid recharge, or for high power output.
- **Leak-resistant Structure:** The LCR battery uses an absorbed electrolyte system. The LCR batteries have exceptional leak resistance, **and can be used in any position.**
- **Long Service Life; Flat or Cyclic:** The LCR battery has long life in float or cyclic service.
- **Easy Maintenance:** There is no need to check the specific gravity of the electrolyte or to add water during the service life. Totally sealed, and needs only charging for maintenance.
- **No Corrosive Gas Generation:** There is no corrosive gas generation during normal use.
- **Exceptional Deep Discharge Recovery:** LCR batteries have exceptional deep discharge recovery and charge acceptance, even after deep or prolonged discharge.
- **DOT & IATA Approval:** Transportation; The SLA batteries should be handled as common cargoes for both air and boat shipping.
- **U.L. Component Recognition:** U.L. Component Recognition under UL924, Section 38, for Emergency Lights and Power Supplier (not UPS), requires that the battery safely vent when overcharged, and tested under mineral oil. It further requires that the equipment and battery be submitted together for formal UL approval. **(UL Component Recognition does NOT remove this requirement for complete package testing).** The manufacturer suggests peak charging all sealed lead acid batteries before use and intermittently during storage.

Panasonic® Nickel-Metal Hydride Batteries and Tabbed Versions

Features: • **Superior Energy Density:** Nickel-metal hydride batteries have approximately double the capacity compared with Panasonic's standard Ni-Cad batteries • **High Cycle Life:** Like Ni-Cad batteries, nickel-metal hydride batteries can be repeatedly charged and discharged up to approx. 500 cycles (under ideal conditions). **Because a specially designed charger will be necessary,** please consult the Panasonic Technical Handbook (P001-ND) regarding the charge system • **Flat trickle charge cannot be used** • **Excellent Discharge Characteristics:** Since the internal resistance of nickel-metal hydride batteries is low, continuous high-rate discharge up to 3C (10C for 4/5SC, SC) is possible in the same way as for Ni-Cad batteries • **Excellent Reliability:** Self-discharge performance is the same or better than that of nickel-cadmium batteries. In addition, charging batteries after extended storage restores original battery capacity. Battery safety has also been improved and verified through testing under a wide range of conditions of use.

Applications: • Communication • Office Automation • Audio Visual Equipment • Other High-Tech Products.

Caution for Safety: Improper usage may cause battery liquid leakage, heat generation or explosion, resulting in equipment failure or injury • Do not disassemble or rework the battery • Do not solder the battery directly • Do not use new batteries together with old batteries, or different type batteries mixed together • Follow the specified charge conditions.

NOTE:
Nickel-metal hydride batteries are not a drop-in replacement for Ni-Cad batteries.

It is the responsibility of each user to ensure that each battery application system is adequately designed safe and compatible with all conditions encountered during use, and in conformance with existing standards and requirements.

Panasonic® Nickel Cadmium Batteries

The Panasonic nickel-cadmium battery is a rechargeable sealed nickel-cadmium alkaline cell.

FEATURES: • Long life • Excellent discharge characteristics • Long shelf life • High-rate charging • Wide temperature range • Reliable, self-resealing vent • Sealed, strong, leakproof construction

APPLICATIONS: ***For Cyclic Use:*** • Consumer applications • Office equipment • Tools • Photography • Toys & Hobby. ***For Trickle or Float Charge Use:*** • Emergency devices • Memory back-up

SPECIAL PURPOSE BATTERIES: Rapid-charge "R" Type: The "R" type cell has a specially improved negative plate with increased gas absorption characteristics. It can be subjected to controlled charging at the 1C rate and rapid-charge in 1 to 1.5 hours is possible. High-temperature "H" Type: By using a polypropylene separator, the "H" type cell can withstand a temp. of 65°C (149°F) during use. When charging is conducted at a low charging current of C/20 to C/30 in a high-temp. ambient, the "H" type cell has a sharply improved capacity compared to a standard cell, due to special electrolyte. High-capacity "E" Type: The extra capacity cells combine a high-capacity density positive plate with a high-density paste negative plate. These cells have 20~30% more capacity than equivalent standard cells. Super High Capacity & Rapid Charge "S" Type: Super high capacity and rapid charge "S" type batteries are ideal for today's high capacity needs. They feature increased capacity & rapid charging within approx. 1 hr. The high-density positive base material of foam nickel is combined with the pasted negative plate to produce a capacity approximately 40% greater than that of the rapid-charge "R" type battery of the same size. High Rate Discharge & Rapid Charge "R/P" Type: This rapid charge, high rate discharge type has been developed through the integration of all Panasonic battery technology. It employs unique plates featuring unsurpassed gas absorption characteristics & a current-collecting system to provide charging in just 1 to 1.5 hours. The internal resistance is also greatly reduced for improved voltage characteristics during high rate discharge at approximately 10CmA.

Lithium Batteries

The main features of lithium batteries are as follows:

- **High Voltage:** Nominal voltage is 3V, which is nearly double that of other batteries which use the aqueous electrolyte system, such as manganese dry batteries, and silver-oxide batteries.
- **High energy density:** Overwhelmingly high energy density, as compared with conventional batteries and other lithium batteries. The energy density is 5 to 10 times higher than that of manganese dry batteries.
- **Long Service and Shelf Life:** Since Panasonic lithium batteries are composed of chemically and thermally stable material, self-discharge is extremely small. Deterioration when stored at room temperatures is ca. 0.5% annually – worry about deterioration is unnecessary.
- **Stable Flat Discharge Voltage:** Since conductive carbon is continuously formed during discharge, internal impedance does not increase until the end of discharge, thus stabilizing discharge voltage.
- **Excellent Temperature Characteristics:** Organic solvent ensures a low electrolyte freezing point so that the batteries can be used in a wide temperature range, -40°C to 85°C is standard (-40°C to 125°C for the High Temperature Coin Type; -40°C to 70°C for Camera Type; -30° to 60°C for CR2004/P9A).
- **BR Types versus CR Types:** BR, or (CF) n/Li, batteries provide a more stable voltage particularly during the last half of discharge, while CR, or Mn02/Li, batteries provide a higher voltage during the first half. CR batteries also can provide a higher current capability than BR batteries. In storage, BR batteries perform better at high temperatures. These characteristics must be taken into consideration when selecting a battery for a particular application.
- **UL Approval:** Panasonic Lithium batteries are UL recognized. UL File No. MH12210.
- **DOT Exemption:** Panasonic lithium cells and multiple cell batteries are authorized for transportation, in commerce, by U.S. shipping exemption DOT-E7052.
- **Disposal Information:** Panasonic lithium cells are not an EPA listed hazardous waste, but may be considered a "characteristic" hazardous waste. Lithium metal, the anode component of the cells, is considered by the U.S. EPA to be hazardous when disposed because it is reactive with water. However, a cell which contains a small quantity of lithium metal is not necessarily a hazardous waste. Disposal regulations and policies are different in each State and are subject to frequent changes. Contact your local jurisdiction for specific advice on disposal.

Manganese Lithium Rechargeable Batteries (ML Series)

Fig. 1

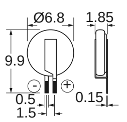

Fig. 2

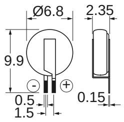

Features:

• **Charging at voltage levels even under 3V.** In order to support the current trend in ICs toward lower voltages, these batteries can be charged at a 3 ±0.2 voltage level, and this makes it easier to set the charging circuits for the circuits which employ 3V ICs • **Large capacity for hour-after-hour back-up** • **Excellent withstand voltage characteristics.** These batteries can withstand the application of a continuous 3.2V voltage at a high temperature of 60°C (140°F)

Applications:

Power source for backing up memory data in mobile telephones, personal handyphone systems, memory cards, pagers, data terminals and office automation equipment.

tyco Electronics Raychem PolySwitch Resettable Fuses

PolySwitch circuit protection devices protect electrical and electronic circuits against excessive current, voltage, and temperature. Like fuses and circuit breakers, PolySwitch devices interrupt the flow of dangerously high currents, whether due to excessive voltage or to a fault condition within the circuit. After switching, the PolySwitch device is latched into its high-resistance, protective state by the small, sustained self-heating current. The protector will reset only after it has cooled and the fault condition has been corrected, thus avoiding continuous cycling that could cause circuit damage. The protector requires no manual resetting or replacement.

Definitions: Maximum Voltage: The highest voltage the device can withstand (in its tripped state) without damage. Hold Current: The maximum continuous current that will not cause the device to trip at 20°C. Trip Current: The minimum continuous current that will cause the device to trip at 20°C. Maximum Current: The largest fault current, at rated voltage, the device can interrupt without being damaged. Maximum R: Maximum non-tripped resistance of the device.

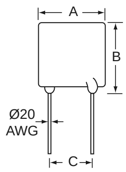
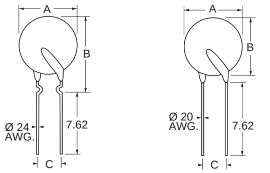
Fig. 1 — RGE and RHE Series



This product line can be used in a wide variety of automotive, computer and general electronics applications. The RGE devices feature high current carrying capability (up to 13 amps) in a small package with fast trip times.

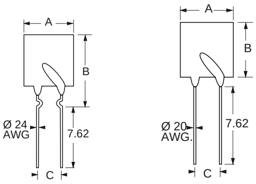
Fig. 2 — RXE Series



RXE010-RXE090 RXE110-RXE375

These products function as the general purpose line of circuit protectors and are well suited for power supplies, alarm systems, speakers, motors and many other applications. The RXE products range in hold currents from .10 to 3.75 amps and complement the RUE devices by providing a higher voltage rating.

Fig. 3 — RUE Series



RUE090-RUE250 RUE300-RUE900

These devices are also designed to be used in a wide variety of general electronics applications. They complement the RXE line by providing a smaller form factor with lower resistance and higher hold current capability (up to 9 amps).

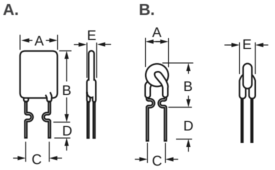
Fig. 4 — RUSB Series

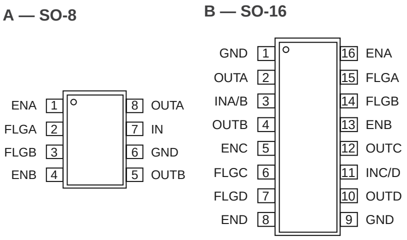


New PolySwitch RUSB devices are designed to meet USB and safety agency requirements.The RUSB family of leaded resettable fuses offers overcurrent protection for USB applications.

Fig. 5 — RYC Series Power Distribution Switches

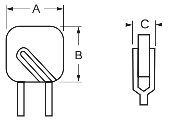
This family is designed for USB self-powered hub applications such as notebook PCs, self/bus-powered stand-alone USB hubs, USB bus-powered hubs in keyboards and USB peripherals such as CCD cameras. They provide efficient and reliable power switching and in-rush current limiting capabilities.

These USB power distribution switches enable power to USB ports upon USB controller commands. The switches signal the controller when faults such as overcurrent, over-temperature, under-voltage lock-out (UVLO) or over-voltage lock-out (OVLO) are detected.



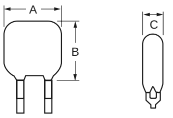
SO-8 Pin No.	SO-16 Pin No.	Pin Function
1 and 4	5, 8, 13, 16	Enable (Input): Logic-compatible enable input. High input > 2.1V typical. Low input <1.9V typical
2 and 3	6, 7, 14, 15	Fault Flat (Output): Active-low open-drain output. Indicates overcurrent, UVLO, OVLO and thermal shutdown
6	1, 9	Ground: Supply return
7	3, 11	Supply Input: Output MOSFET drain. Also supplies ICs internal circuitry. Connect to positive supply
5 and 8	2, 4, 10, 12	Switch Output: Output MOSFET source. Typically connect to switched side of load

Fig. 6 — TR Series



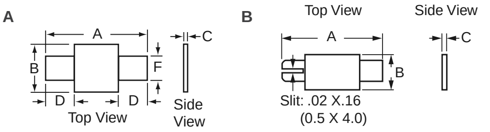
This family uses a new geometry to build high voltage (250V-600V) products for telecommunications applications.

Fig. 7 — Encapsulated TR Series



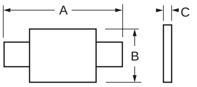
This family uses a new geometry to build high voltage (250V-600V) products for telecommunications applications.

Fig. 8 — LTP Series



Similar to the SRP family of PolySwitch strap products, LTP devices provide reliable, noncycling protection for rechargeable batteries and have a slim, low-profile design that makes them easy to install. LTP devices also offer additional protection at elevated temperatures.

Fig. 9 — SRP Series



These products provide reliable, non-cycling protection for rechargeable batteries. Weldable nickel leads and a narrow, low-profile design make these devices extremely easy to install on the edges of battery packs.

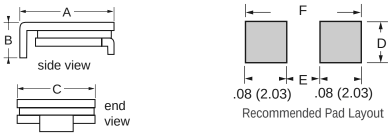
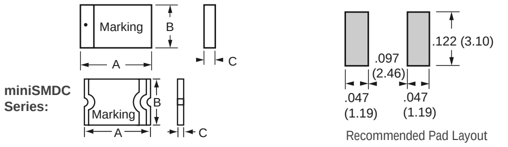
Fig. 10 — SMD



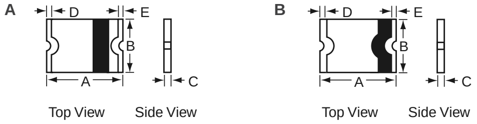
This product line is specifically designed for surface mount applications. The products range in hold currents from 0.3 amps to 2.6 amps and voltages from 6 volts to 60 volts. These devices are ideally suited for high density board applications in computer and computer peripheral products, telecommunications and general electronics applications. They are designed to be reflowed onto a PCB using standard surface mount processes. Packaged per EIA-481 standard.

Fig. 11 — miniSMD



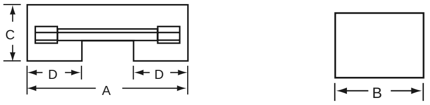
The miniSMD resettable fuses extremely small size makes them excellent choices for keyboard and mouse ports, SCSI devices, battery packs, PC cards and sockets, cellular modems and phones, and portable electronic equipment. SMT packaging for automated assembly compared to SMD the MINISMD offers: 40% reduction in size, 300% faster time to trip, 50% reduction in DC resistance, 66% reduction in profile, 80% reduction in mass and drop in replacement for the NANO 2 fuse in many applications.

Fig. 12— microSMD



This product line is designed for surface-mount applications. Its smaller component size enables installation on crowded printed circuit boards and in small end-user devices such as digital cameras, personal digital assistants (PDAs) and palm-top computers. The new low hold current devices are ideal for protecting industrial sensors and data acquisition systems.

Fig. 13 — nanoSMD *NEW!*



The nanoSMD series reduces the component size to a 1206 footprint, nearly half the size of the microSMD series and one-quarter the size of the popular miniSMD series. The industries fastest time to trip. Smaller size saves board space and cost. Compatible with high volume electronics assembly.

tyco / Electronics Raychem SiBar Thyristor Surge Protectors

SiBar thyristor surge protectors are designed specifically for telecommunications and computer telephony applications, including: • Modems • Fax machines • PBX Systems • Phones • POS Systems • Analog and digital linecards • Other customer premise and network equipment requiring protection.

Features: • Bidirectional transient voltage protection • High off-state impedance • Low on-state voltage • High surge capability • Glass-passivated junctions • Short-circuit failure mode • Surface-mount technology • UL 497B recognized, file #E179610

SiBar thyristor surge protectors are bidirectional silicon devices that foldback in the presence of transient overvoltage faults. When the breakover voltage of a SiBar device is exceeded, the device switches from high to low impedance to protect sensitive downstream equipment from harmful voltage surges. The device remains latched in a low-impedance state until the current decreases below the hold current, at which point the device returns to its high-impedance state.

SiBar devices may be used in conjunction with PolySwitch resettable fuses in telecommunications applications, including network equipment and customer premise equipment. Proper selection of both devices can provide reliable, self-resetting overvoltage and overcurrent protection, allowing designers to meet worldwide telecommunications standards and to lower equipment-service and warranty cost.

BOURNS Multifuse® Resettable Overcurrent Protectors

Bourns' Multifuse products provide overcurrent protection against circuit faults and safeguard against potential overcurrent damage of critical circuitry and loads in a vast amount of applications. This series is made of highly conductive, carbon black loaded polymer material. When a short circuit occurs, the devices start to heat rapidly until they reach a critical temperature of approximately 120°C. At this point the densely packed crystalline polymer matrix changes to an amorphous structure as it undergoes a phase transformation. Resistance increases by many orders of magnitude. The material will stay in this high-resistance state as long as the power is applied. The device will remain latched, providing continuous protection until the fault is cleared and the power is removed. With the fault removed the resistance quickly returns to its original value and the device is ready to operate again. **Agency Approvals:** The MF-R & MF-RX product families have UL, CSA, and TUV recognition to 30 volts. UL #E17454S, CSA #CA110338, and TUV #E9772255.01

MF-SM SERIES: This series is a SMT PTC Resettable Fuse designed for applications anywhere there is a low voltage power supply and a load to be protected including computers and peripherals, general electronics and automotive applications. They are fully compatible with current industry standards. Packaged per EIA 481-2 standards. **Agency Approvals:** UL #E17454S, CSA #CA110338, and TUV #E9772255.01

Littelfuse® PTC Resettable Devices - 2029L / 3425L Series

PTC Resettable devices utilize a unique polymer-based, Positive Temperature Coefficient (PTC) material to protect electrical circuits against overcurrent conditions.

PTC Resettable Operation: In normal operation, the Littelfuse PTC has many conductive paths and a very low resistance. In an overcurrent condition, the temperature of the polymer material rises. This dramatically reduces the conductive paths resulting in an immediate rise in resistance. In this condition the device provides circuit protection by significantly limiting the flow of current. However, once the cause of the initial overcurrent condition is eliminated, the Littelfuse PTC cools down and resets to a low resistance value permitting the normal current flow to resume.

Agency Approvals: • UL: Recognized under Components Program of Underwriters Laboratories • CSA: Recognized under Component Acceptance Program of the Canadian Standards Association • TUV approved (F2155 TUV Pending)

• **Recommended Reflow Conditions:** IR, forced air convection, vapor-phase (Devices are not designed to be wave soldered) • **Device Labeling:** Device marked with amperage rating and date code, and Letter "L"

ELECTRICAL DEFINITIONS:

- **Ihold**: Hold Current: maximum current device will sustain for 4 hours without switching at 20°C
- **Itrip**: Trip Current: minimum current that will switch the device into a high resistance state at 20°C
- **Isc**: Maximum short circuit current device can withstand at rated voltage
- **Ril**: Minimum initial resistance of device at 20°C, prior to tripping
- **Riu**: Maximum initial resistance of device at 20°C, prior to tripping

NOTE: *Devices are not intended to be used for continual, repeated tripping.*

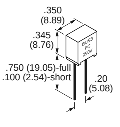
PC-TRON® Subminiature Fuses



Characteristics: Offers short-circuit performance which until now could only be found in much larger size glass tube fuses. At 250 VAC, the 1/2 to 3 amp PC-Tron can safely interrupt 50 amperes; at 125 VAC the 1/2 to 5 amp versions can interrupt 10,000 amperes. This makes the PC-Tron subminiature fuse ideal for line-side protection of power supplies. **Time Current:** • Carry 100% of rating for 4 hrs. min.; open at 200% of rating in 10 sec. max. **Construction Material:** • Body: High temperature plastic • Leads: Tin-plated copper **Agency Approvals:** UL Recognized and CSA Certified

Thermal Circuit Breakers

ETA Circuit Breakers for equipment are designed as safety critical items for protection during equipment failure. These circuit breakers may be required to operate just occasionally or very often during the life of the equipment and can confidently be reset by inexperienced personnel. Applications range from motors and transformers to appliances and automotive. Thermal breakers respond in a similar manner as a slow blow fuse. All thermal breakers carry 100% rated current continuously and trip within one hour at 140% rating. Selection should be based on 125% of your maximum current required. Magnetic breakers are fast-acting devices which are highly tolerant to changes in ambient temperatures and sensitive to small overloads. All panel mount breakers come with dress nut and hex nut.

NOTES:

1. **Rated Functioning Temperature** (UL: TF, CSA, VDE, BEAB: Tf). The temperature at which a TCO changes its state of conductivity to open circuit with loading detection current only. Tolerance: ▽: ±7°C; UL, CSA, VDE, BEAB: 0 / -10°C
2. **Functioning Temperature** (Fusing-off temperature): The functioning temperature at which a TCO changes its state of conductivity to open circuit in the ambient air oven which increases temperature by 1°C per minute and with loading the detective current 0.1A or less.
3. **Maximum Operating Temperature:** The maximum temperature at which a TCO can be maintained while conducting rated current for 3000 h.
4. **Holding Temperature** (UL: TH, CSA: Th, VDE, BEAB: Tc). The maximum temperature at which a TCO can be maintained while conducting rated current for 168h which will not cause a change in state of conductivity to open circuit.
5. **Maximum Temperature Limit** (UL: TM, CSA, VDE, BEAB: Tm) The maximum temperature at which a TCO can maintain its mechanical and electrical properties without closing again for 10 minutes after a TCO has changed its state of conductivity.

‡ P10908-ND and P10910-ND are additionally approved for UL, on DC50V 5A.
† Std. DC Resistance is <15mΩ, A = <16mΩ, B = <17mΩ.

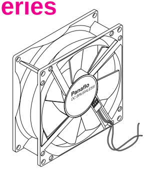
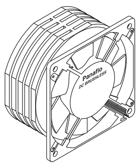
Panasonic DC Fans FBA & FBL Series

FBA Series



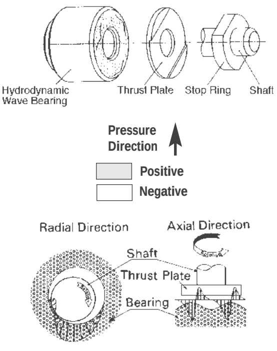
FBA fans force air out in a “funnel” type pattern, and are ideal when cooling a specific area that is surrounded by numerous components with minimum ventilation available.

FBL Series



Louvered design increases air flow and decreases turbulent noise at standard rating conditions.

Hydro-Wave Bearing Technology Fans



Bearing Structure and Pressure Distribution

Panaflo's unique hydro-wave bearing (HWB) technology addresses the traditional weakness of sleeve bearings...axial friction. By utilizing our unique HWB system, the thrust plate "floats" on a circulating film of oil greatly reducing the axial friction and the bearings deterioration. The HWB pattern on the bearing virtually eliminates contact with the thrust plate which is depicted above.

Panasonic Thermal Printers

THERMAL PRINTERS:
Use a non-impact method for printing. This is accomplished by using chemically treated thermal paper. Chemicals suspended in the paper react to heat generated by the print head to form dots that make up the characters or image. Panasonic offers a thermal serial printer and a thermal line printer. The serial printer uses a moving head that prints one character at a time, it is most suited for character printing, although the high speed model does support graphics. Its main benefit is low cost. Line printers have a fixed print head, printing one line at a time. It is suited for both high speed character and graphic printing. Its main benefits are higher definition graphic printing along with fewer moving parts.

INTERFACE BOARDS:
Acts as an interface between user's system and the thermal printer. Monitors temperature and paper status. Controls motor(s) and thermal head energy for optimal printing. Generates built in test pattern. Accepts both simplified Centronics or RS-232C (TTL only) interface.

Switchmode / High Frequency Inductors

Rod Core Inductors

DESCRIPTION:
TRIAD high current rod core inductors from MagneTek provide cost effective energy storage. By conditioning the output signal, the inductor smoothes out the current waveform to provide a more stable current. These low cost inductors are designed to be compatible with automated P.C.B. installation.

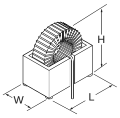
Toroidal Inductors



DESCRIPTION: TRIAD toroidal inductors condition the output signal by leveling out the current waveform providing a more stable current supply. **TECHNICAL NOTES:** • Nominal inductance values are typically 10% higher than minimum rating. • Biased inductance measured at rated DC amps.

CONDOR Medical Global Switchers

9288B-ND Power Engineering Manual **$2.95**

Global Performance switching power supplies with the agency approvals you need.

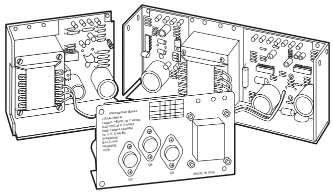
FEATURES:
- Wide range input (85-264V) • Approval to IEC601-1, UL2601 and CSA 601.1 • Conducted Emissions to FCC and VDC Class B • 2-Year Warranty • Models from 28-225W

Input Protection: Internal AC fuse provided on all units. This fuse only blows if a catastrophic failure occurs in the unit — it does not blow on overload or short circuit. AC input protected against line transients by metal oxide varistors on all medical units.

Output Noise and Ripple: 0.5% RMS, 1% Pk-Pk maximum on all outputs (20MHz bandwidth on GSM7 & GSM28 series.

Temperature Coefficient: 0.03%/°C typical for all outputs.

GENERAL SPECIFICATIONS:
- **AC Input:** 85-264 VAC, 47-63 Hz single phase
- **Safety Specifications:** All medical models are approved to UL544/UL2601, IEC601-1, CSA234L3, VDE0750 and CE9LVD
- **Overload Protection:** Fully protected against short circuit and output overload. Short circuit protection is cycling type on Outputs #1 and#2; foldback type on Outputs #3 and #4. Recovery after fault is automatic.
- **Temperature Rating:** 0°C to 50°C full rated load.
- **Minimum Load:** Single output units require no minimum load except for GSM28 (GSM28 = ±5%). Multiple output units: GPM40 = 0.4A, GPM55 = 0.7A, GPM80 = 1A, GPM130 = 3A, GSL50 = 0.8A.
- **EMI Compliance:** All models include EMI filtering to meet or exceed conducted emissions of CISPR 11 Class B, VDE0871 Class B (FCC Class B, CISPR 11 Class B and EN5522 Class B for GSM7 & GSM28 Series).
- **Voltage Adjustment:** Outputs adjustable ±5% minimum via built-in potentiometer (Factory set for GSM7 & GSM28 Series).
- **Remote Sense:** Provided as a standard feature on the +5V output of the GPM130 and on all single output units except for GSM7 and GSM28 series.



- **Reverse Voltage Protection:** All outputs protected against inadvertent application of reverse voltage up to 1 times the rated current of the reversed output.

Features:

• Worldwide AC input Capabilities • Meets domestic and foreign safety standards: UL, CSA, IEC, VDE, BPO, ECMA, CE • Low output ripple • 2 hour burn-in • Made in U.S.A.

Overvoltage Protection Options:

Optional overvoltage protection modules are offered, each is user adjustable from 6.4V to 34V. Note: Outputs with factory built-in OVP are indicated in the Voltage/Current Rating Chart for each model.

General Specifications:

• AC Input: 100/120/220/240 VAC +10%, -13%. 47-63 Hz. Tolerance for 230 VAC operation is +15%, -10%. Factory wired for 120V operation • DC Output: Adjustment range ±5% minimum. Voltage non-adjustable on "3 terminal regulator" outputs • Line Regulation: ±.05% for a 10% line change. Exceptions: ±.01% for F, G case models, ±0.5% for all other outputs using "3 terminal regulators" • Load Regulation: ±.05% for a 50% load change. Exceptions: ±.02% for F, G case models, ±0.5% for all other outputs using "3 terminal regulators" • Output Ripple: 5V through 15V models: 5.0 mV PK-PK maximum. (3.0 mV PK-PK maximum for F, G case models). 24V through 250V models: 3.0 mV PK-PK plus .02% of output voltage, maximum. All "3 terminal regulator" outputs: 0.2% PK-PK maximum • Overvoltage Protection: Provided on 5V outputs where indicated. Set at 6.2V ±0.4%. Other outputs use optional overvoltage protectors OVP12 and OVP24. • Operating Temperature: 0°C to 50°C full rated, derated linearly to 40% at 70°C. • Efficiency: 5V outputs — 45%, 12V and 15V outputs — 55%, 24V through 250V outputs — 60% • Master/Slave Operation: Provided on F, G models only. For parallel operation of up to 6 units.

Safety Specifications:

All models exceed the following safety standards — Leakage Current Line to Ground (max.): 0.05 mA • Dielectric Withstand Voltage (min.): Input to Ground — 3750VRMS, Input to Outputs — 3750VRMS, Outputs to Ground — 500VDC • 2 year warranty

Safety agency approved: UL recognized, CSA certified, and TUV Essen certified. • Power Fail Warning Signal. 100% test, inspection and burn-in. • Overload Protection • Overvoltage Protection • Overtemperature Protection **AC Input:** Automatic selecting: 90-264 VAC, 47-63 Hz single phase. **Temperature Rating:** 0°C to +50°C • Two Year Warranty

MPU150 - 150 Watts with PFC

The MPU150 is the first product in this power range incorporating PFC in a low profile package that meets 1U height constraints. All models feature remote sense on V1 and V2 to provide independent compensation of power cable losses.

Power-Ones' unique dual-converter architecture combines high reliability, achieved through reduced component stresses, with exceptional regulation. Other standard features include CE Marking, current sharing on V1 and V2, thermal shutdown, and remote inhibit. Additionally,only 300 Linear Feet per Minute (LFM) airflow is required. **FEATURES:** • Active power factor correction meets EN61000-3-2 • Low profile height fits 1U height constraints • Dual main outputs provide 3.3V and 5V for mixed logic applications • CE Marked to the LVD • Autoranging AC input, 85-264VAC • Isolated V3 and V4 can be used as plus or minus outputs

Power Supplies SWE Series

FEATURES: • Meets CE marking • Ultra thin and compact • High isolation • Universal input (85~264 VAC) **Safety Standard:** UL, CSA, EN60 950. **Noise Immunity:** EN61000-4-2~5. **Noise Standard:** FCC, VCCI, EN55011, EN55022 **DESCRIPTION:** Toko’s CE approved single output series. Compact size and high reliability make this series an excellent choice when a very low profile is required. Six standard single output ratings with 65 versions are available, all with universal input (85 ~ 264 VAC). If you need the low profile of the SWE Series, but need more flexibility in output, the SWE Series can fit into your distributive power architectures by adding Toko’s DC-DC converters to your design. This will keep your costs low, while allowing you to choose the output you need.

The UltraFlex Series gives you the flexibility you need to cope with today's fast-paced new product development cycles and relentless time-to-market schedules.

SPECIFICATIONS:

- **AC Input:** 85-265VAC, 47-63 Hz (Case A&B)
- **DC Input:** 36-75 VDC on Case C
- **Inrush Current:** Less than 40A peak
- **Efficiency:** 75% typical at nominal line voltage
- **EMI:** Conducted EMI conforms to EN55022, Level B, and FCC Docket 20780 Part 15, Subpart J, Class B for AC input versions. Conducted EMI to EN55022A for DC input models.
- **Power Factor and Harmonic Correction:** All models are compliant with EN60555-2 and EN61000-3-2, with up to 250 VAC input. Power factor is 0.998 typical at full load.
- **Input Transient and ESD Protection:** IEEE-C62.41, Category A3; IEEE-587 Category B; EN61000-4-2/4/5 Level 3.
- **Regulated Voltage:** Line Regulation — <0.1% for line variations from 85-265VAC; <0.2% for dual output modules. Load Regulation — <0.4% for load variations from no load to full load and full load to no load; <0.8% for dual output modules. Cross Regulation — <0.1% between single output modules; <3% between dual outputs with 25% load change on high current output. Ripple and Noise — <0.33% or 15mV RMS; <1.0% or 50mV pk-pk (<50mV pk-pk on 5V and 12V outputs) on single output modules; <1.0% or 50mV pk-pk on dual output modules. Temperature Coefficient — 0.02%/°C.
- **Output Adjustment Range:** ±10% of nominal output voltage on all models.
- **Thermal Protection:** The power supply will shut down in the event of an overtemperature condition (the fan will continue to operate). To restore operation, the supply must cool down and the AC input must be recycled.
- **Overcurrent Protection:** Overcurrent protection on single output modules limits the current from 110% to 120% of current rating on outputs greater than 400W. (110% to 150% of current rating on outputs less than 400W.) Upon removal of the overload condition, normal operation resumes automatically.
- **Overvoltage Protection:** Factory-set overvoltage protection from 120% to 130% of nominal output on single output modules. Dual output modules have factory-set overvoltage protection of 120% to 140% of nominal. Internal circuitry will shut down the individual output module. Reset the OVP by cycling the input power.
- **Preload:** External preload is not required on single output modules. Dual output modules require 1A minimum load on the highest current output (Output #1).
- **Dynamic Response:** ±25% load change (from 75% base at a rate of 1A/µsec) will result in input deviation of less than 2% or 100mV peak (125mV for less than 5V outputs). Output recovery to within 1% of nominal to be less than 300µsec.
- **Holdup Time:** The output voltage will remain within regulation limits for 20msec at full load with nominal 115/230VAC line input.
- **Remote Sensing:** Remote Sense compensates for total cable drop of up to 0.5VDC. Available on all outputs.
- **Isolation Ratings:** Conforms to safety agency requirements.
- **Cooling:** Provided via an internal DC operated ball-bearing fan.
- **Operating Temperature Range:** Full operation from 0°C to +50°C with 100% rated power on most models. Derate linearly from +50°C to 50% power at +65°C. Derate H, V, W and Y models in 600W case starting at +40°C to 50% power at 55°C.
- **Storage Temperature:** -40°C to +85°C
- **Military Specifications:** Shock — MIL-STD-810E, Method 516.4, Procedure I; Vibration — MIL-STD-810E, Method 514.4, Category I, TP1.
- **Mounting:** Two mounting surfaces on all models.
- **Safety Agency Approvals:** The UltraFlex Series meets UL 1950, CSA 22.2 No. 234, TUV, EN60950/IEC950, and SELV. All models carry the CE mark to indicate conformance to the Low Voltage Directive on complete custom-assembled units.
- **Guarantee:** Lambda's 3-year guarantee includes labor and parts. Guarantee applies to operation within published specifications at the end of 3 years.

Non-Amplified Optical Sensors

Omron's optical sensors are designed to meet the needs of positioning, detection of components and objects, cam-timer switching-control and robotic control. Available in two types: nonamplified optical sensors are low cost, fast response optical sensors used mainly in design-in processes. Amplified optical sensors are ideal for plug and play applications where external light does not affect performance and wide input voltages can be applied.

NEW! Photo Interrupter

Photo Interrupters are a transmissive photosensor series in which a high efficiency GaAs infrared light emitting diode is used as the light emitting element, and a high sensitivity phototransistor is used as the light detecting element. The two elements are arranged so as to face each other, and objects passing between them are detected.

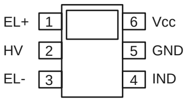
TOKO

EL Lamp Drivers



The TK659 Electroluminescent (EL) Lamp Driver has been optimized for battery controlled systems where power consumption and size are primary concerns. The miniature device size (SOT23L-6), together with the miniature Toko EL coils (D32FU, D31FU, D52FU), further helps system designers reduce the space required to drive the small EL panels.

Low 3.5 to 6 volt input voltage is ideal for battery operation. The TK659 provides a constant output power to the lamp, independent of variations in the battery voltage. This architecture allows the output voltage to remain relatively constant as battery voltages decay, without the need for directly sensing the high voltage output of the EL driver. The capacitance of the EL Panel is typically proportional to the size of the lamp (a 1 square inch EL Panel typically exhibits approximately 5nF of capacitance load).

The TK6591 series of devices has been optimized to drive EL panels which are approximately 1-2 square inches in size. The TK6592 series of devices has been optimized to drive EL panels which are approximately 2-4 square inches in size. The TK6593 series of devices has been optimized to drive EL panels which are approximately 3-6 square inches in size (1 square inch = 645 mm^2).

Panasonic

EL Elements for Backlighting Applications

Panasonic's new high brightness EL backlighting sheets are thin and flexible. They may be trimmed to size or cut in almost any shape, making them ideal for many of today's backlighting applications. Multiple terminals around the entire outside edge provide numerous power input options. Terminals can not be soldered to, but may be with conductive epoxy, pressure contacts, or stitched terminals. Requires inverter which is sold separately.

GRAPHICS DEVELOPMENT SOFTWARE:

Help for the Development Engineer - Development Software on CD

(Save 80% of the effort to develop new graphics software for Noritake displays)

Noritake Display API Library (1.1 Introduction): The Noritake Display API library is a portable C language library of routines which will provide an application programming interface (API) to a user application. This API will allow the user application to call functions to perform useful graphics operations, such as “draw a line”, or “put text”, and will convert these functions to the appropriate bit-level operations for a Noritake VFD display. The library will, in turn, call a lower level interface to actually manipulate the hardware. This I/O access layer will convert the API layer bit-level data to actual hardware I/O accesses.

The primary purpose of this library is to provide Noritake customers with a portable library to allow them to use Noritake VFD displays in their products with a minimum of effort. In order for a customer to port the library to their platform, they must provide, in addition to their application, the I/O Access Layer and the Digtal I/O Hardware. The I/O Access Layer will be just a few simple functions that will allow the hardware to write or read to the command or data port on the VFD display. In the demonstration software, these functions will communicate with a digital I/O board attached to a PC. In a microcontroller-based system, the Digital I/O hardware may consist of simply an address decode, or it could be a couple of latches or buffers and associated address decode logic.

The Display API Library can be broken into four main parts: graphics primitives, text primitives, glyph-based text primitives and display control.

GRAPHICS SOFTWARE DEVELOPMENT KIT:

Demonstrate Your Application from Your PC - Easily create text, boxes, lines and freehand drawings:

• Load the Noritake Software onto your Window 95™ or 98 PC • Connect the graphics display to the interface card • Connect the power supply to the interface board • Connect the interface card to your parallel port

Using the Noritake software on your PC: • Download BMP files and illustrate them on the graphics display • Enter text • Create boxes, lines and freehand drawings easily.

Noritake Development Kit Includes: • Noritake Graphics Development Software • Noritake GU256x64-372 Graphics Display • Power Supply • Interface board from display to PC parallel port (parallel port cable not included - recommend AE1012-ND)

Accelerometers – PC Board Mountable

Description:

These piezoresistive silicon accelerometers consist of a micro machined silicon mass suspended by multiple beams from a silicon frame. Piezoresistors located in the beams change their resistance as the motion of the suspended mass changes the strain in the beams. Silicon caps on the top and bottom of the devices are added to provide over-range stops. This design provides for a very low profile, high shock resistance, durability and built-in damping over a wide usable bandwith.

Features:

• ±0.5% Non-linearity, (typ.), ±2% max. (Best fit straight line; for full scale range of 10g or less) • DC Response • Built-in damping • Built-in overrange stops • Low power

Model 85 – 316L: This micro-machined piezoresistive silicon pressure sensor is designed for applications where compatibitility with corrosive media must be maintained. The sensor chip is mounted on a TO style header, which is resistance welded to a 316 stainless steel package, sealing a small volume of silicone oil between the diaphragm and the sensor chip. The ISO pressure housing utilizes the oil column to couple the piezoresistive sensor to the isolation diaphragm. A thick film ceramic compensation board with laser trimmed resistors, and an additional gain set resistor to normalize pressure sensitivity are an integral part of the sensor package.

Model 86 – 316L: This is a small profile, media compatible, piezoresistive silicon pressure sensor packaged in a 316L stainless steel housing and is designed for O-ring mounting. The sensing package utilizes silicone oil to transfer pressure from the 316L stainless steel diaphragm to the sensing element. It is designed for high performance, low pressure applications. A ceramic substrate is attached to the package that contains laser-trimmed resistors for temperature compensation and offset correction. An additional laser-trimmed resistor is included which can be used to adjust an interchangeability to within ±1%.

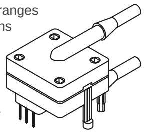
Ares Series Pressure Transducers



The Ares Series is a small, low cost pressure transducer, which is able to measure pressures as low as 0 to 5, 0 to 10, 0 to 15 inches of water, and 0 to 1 psig. The ranges combined with the small physical size make the device ideally suited for applications such as HVAC, medical equipment and flow monitoring. The ASIC is a mixed signal CMOS sensor interface that uses differential switched capacitor architecture, and was specifically designed to compensate for the errors associated with piezoresistive silicon sensors.

Features: • Very low pressure ranges • Small size • PCB mountable • Solder reflow capability • Barbed pressure ports

MEASUREMENT
SPECIALTIES

Rugged Stainless Steel Pressure Transducers Featuring Microfused Technology

The MSP pressure transducer is designed for high-volume, low-cost commercial, industrial and off road applications which require accurate measurement of gases or liquids. Operating ranges up to 10,000 psi is available with your choice of output signal in volts, millivolts, or milliamps. The MSP uses a micro machined silicon strain gauge inorganically bonded to a machined stainless steel diaphragm; no welds, no 0-rings, no silicone oil. All wetted surfaces are stainless steel and all signal conditioning electronics are housed in a stainless steel cover which provides protection from hostile environments. The housing is sealed and requires no maintenance. Each transducer is thoroughly tested and calibrated before shipment. **Applications:** Pumps and Compressors • Hydraulic / Pneumatic Systems • Energy and Water Management • Pressure Instrumentation • Process Control, Off Road Refrigeration, HVAC.

The Model 3255 is a two-chip accelerometer designed for low cost surface mount applications. The package can be mounted in one of two orientations, allowing the measurement axis to be either parallel or perpendicular to the mounting surface without the use of costly brackets. It consists of a micro machined silicon mass suspended by multiple beams from a silicon frame. Piezoresistors located in the beams change their resistance as the motion of the suspended mass changes the strain in the beams. Silicon caps on the top and bottom of the device are added to provide over-range stops. This design provides for a very low profile, high shock resistance, built-in damping over a wide usable bandwidth. Each sensor is individually serialized.

Features: • Surface Mount Pkg. • ±0.5% Non-linearity Typ. • Self Test Function • DC Response • Built-in Damping • Built-in Over-range Stops

LDT Vibration Sensor

Dim. in mm

Typically, a 0.005” (125µm) polyester layer is laminated to a 28µm piezo film element. When used in a “bending” mode, laminated film elements develop much higher voltage output when flexed than non-laminated elements. The piezo film is off the neutral axis in the laminate, and is strained more when flexed.

LDTM

Also available with a mass (M) which provides higher output (mv/g) for higher sensitivity applications.

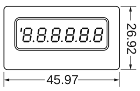
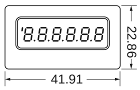
MDMU Miniature Electronic 6-Digit Counter/Timer/Tach

Panel Mount



Circuit Board Mount



• LCD, Positive Image Reflective or Negative Image Transmissive with yellow/green or red LED backlighting • Counter, timer and tach all in a single unit • Rate multiplier/prescaler from 0.0001 to 1.9999 in count and tach modes • 10 ranges in internal timer mode • Selectable decimal points • 5 VDC powered • Panel mount or PC board mount

DESCRIPTION

The MDMU is a complete 6-digit counter/timer/tach in a small panel or printed circuit board mounted package. It is designed to operate from a 5 VDC power supply. It has a 6-digit LCD with 0.35" (8.89mm) high digits and 5 selectable decimal points. In the timer modes, a flashing annunciator is supplied to indicate that the signal input of the MDMU is active. The displays are available in Positive Image Reflective (black digits, reflective background) or Negative Image Transmissive (illuminated digits, dark background) with red or yellow/green backlighting.

The **Counter** mode can be selected by setting the Mode Select Inputs to the appropriate levels (Hardware selection). A rate multiplier of 0.0001 to 1.9999 and a decimal point of 0 through 0.00000 can be selected using the *Program* mode. Decimal points may also be set using the DP Inputs (Hardware selection). Both the Count (CNT) and LSC Inputs can be used. (Using the *Program* mode options causes the counter to increment on the opposite edge of the Input signal.)

The **Timer** mode and range can be selected by either setting the Mode Select Inputs to the appropriate levels (Hardware selection) or by selecting the range in the *Program* mode. The timing range increments available are 1 msec, 10 msec, 100 msec, 1 sec, 0.1 min., 1 min., 0.01 hr, 0.1 hr, 1 hr, and hr:min:sec. The *Timer Active* annunciator will flash at a 2 Hz rate when the input to the timer is activated. Both the CNT and the LSC inputs can be used. The Inhibit (INH) Input can be used to enable or disable Leading Zero Blanking (LZB).

The **Tach** mode can be selected by setting the Mode Select Inputs to the appropriate levels (Hardware selection). In the **Tach** mode, the MDMU operates as a fixed 1 second time base tachometer. In the *Program* mode, the time base can be set 1 through 7 seconds (in whole second increments). The rate multiplier can also be programmed from 0.0001 through 1.9999. Decimal points can be set from 0 through 0.00000. Decimal points may also be set using the DP Inputs. Both the CNT and the LSC Inputs can be used.

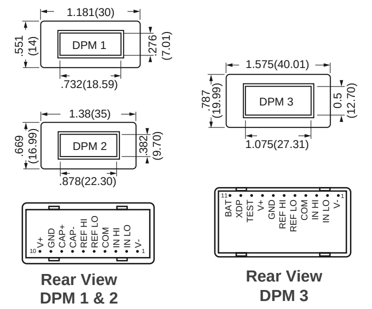
MARTEL ELECTRONICS

Universal Volt/Ammeter

When choosing a Martel Panel Meter for your application, be aware of the difference between standard versions and "single-ended" versions designated by the suffix "S". Use standard versions with floating (isolated) input signals and use single-ended (S-type) versions when the signal to be measured shares the same ground as the meter's power supply. If in question, contact Digi-Key top obtain full data sheets before ordering.



Martel uses advanced components and the latest miniaturization techniques to produce the world's smallest DPM module. Miniature size means the module can be integrated into the smallest of enclosures for local indication. Its low cost means it will suit high and low volume applications. The snap-in integral bezel makes mounting easy.

The "Normal" DPM features true differential input, auto-zero, auto-polarity, programmable decimal points, and a 200mV Full Scale Reading (F.S.R). The FSR is adjustable with the use of external resistors.

Very low power consumption allows long battery life making it very useful in handheld equipment. For single rail use, the "S-type" DPM features a built in negative rail generator enabling the meter to measure a signal referenced to its own power supply 0V.

Blue LEDs

High Brightness

Max Ratings:

Power Consumption: 120mW
Forward Current: 30mA
Reverse Voltage: 5V
Operating Ambient Temperature: -25 ~ +80°C.
Storage Temperature: -30 ~ +100°C

Water clear lens when off.

Blue LED Precautions in Handling:

A blue LED is sensitive to static electricity and care should be fully taken in handling it. Particularly, when an overvoltage is applied, which exceeds the absolute maximum rating of the blue LED, its energy damages the LED.
